

Ibrahim Al Omran

ibrahimao2005@gmail.com — 647-766-6116 — ibrahimalomran.com

Education

McMaster University

B.Eng, Software Engineering

Expected 2027

Hamilton, ON

Technical Skills

Languages: C, Java, JavaScript, Python, Verilog, Bash, HTML/CSS, TypeScript

Technologies: React, Node.js, Firebase, Prisma, Supabase, Tailwind CSS, Git, FastAPI, Next.js

Team Projects

Live Categories (Next.js, Firebase)

App — Repo

- Developed a multiplayer online “Categories” game with persistent stats and seamless live server integration.
- Integrated diverse public APIs (**OMDb**, **Google Books**, etc.); deployed with **Firebase** + **Kubernetes**
- Contributed to **Firebase Auth** and database storage, **frontend UX**, APIs, and guess-validation logic.

Resume Matcher (Next.js, FastAPI)

App — Repo

- Engineered a web app that scores resumes against job postings and dynamically generates tailored **LaTeX** updates with AI.
- Built with **React**, **FastAPI**, **Groq LLaMA 3**, and advanced **PDF/LaTeX** processing libraries.
- Assisted in implementing the **AI** for resume analysis, automated **LaTeX** generation, and enhancing UI.

Rescue Drone Mission (Java)

Repo

- Created a simulated drone exploration system for islands with safe navigation and return-home logic.
- Applied robust **OOP design patterns** and error handling; contributed 30% of code in 3-member team.
- Practiced **Agile methodologies** with **Kanban boards** to coordinate tasks and ensure iterative progress.

Personal Projects

Schedules (TypeScript, Supabase)

App — Repo

- Built an app that parses **XLSX** schedules to display shifts, coworkers, and sync with **Google Calendar**.
- Adopted **Prisma** and **Supabase** for reliable storage; used actively by majority of coworkers.
- Enhanced workplace productivity by delivering accurate, automated shift visualization.

PinPoint Geography Quiz (React, Firebase)

App — Repo

- Developed an interactive geography quiz with survival mode and global leaderboard (15+ users).
- Implemented real-time tracking with **Firebase**, deployed globally on **Vercel**.
- Crafted an engaging gameplay loop with live leaderboards and competitive streak tracking.

Autonomous Recycling System (Python)

Repo

- Programmed a bottle-sorting system using weight/color sensors and robotic arms in **QLabs** simulation.
- Filtered noisy input to achieve 90%+ classification accuracy across 50+ rigorous tests.
- Designed robust sensor-control pipelines that elevated system precision and reliability.

Dynamic Tic Tac Toe (Java)

Repo

- Engineered a scalable Tic Tac Toe with variable board sizes and dynamic win conditions.
- Implemented modular **OOP** game logic and a responsive interactive UI.
- Elevated gameplay flexibility by delivering an adaptive rules engine for diverse board scenarios.

Awards

McMaster Award of Excellence

Highest Average in Grade 11 and 12 Mathematics
