EDUCATION

B.Eng. Software Engineering (Co-Op) — GPA: 3.86/4.0 *Expected Graduation: April 2028*
McMaster University — Free Choice Admission (Top 1% of All Applicants) Hamilton, ON
Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Design (OOP & Design Patterns), Distributed Systems, Machine Learning, Concurrent Design, Requirements Engineering

EXPERIENCE

Ascendance Foundry *Sept 2026 – Current*
Software Engineer *Toronto, ON*

- Partnered with client teams and **non-technical stakeholders** to scope business problems and translate requirements into custom **AI-powered software and automation solutions**.
- Owned the **end-to-end product development cycle**, from prototyping and application development through testing, debugging, deployment, and client adoption.
- Supported the client's **ERP system bring-up**, building integrations and automations that streamlined data flow across business operations.
- Performed **DevOps** work, writing and deploying **Terraform** infrastructure-as-code across **Azure** and **GCP** environments.

AMD *Jan 2026 – Aug 2026*
Software Engineer Intern *Markham, ON*

- Translated **end-to-end ML workloads** into **GPU kernels** optimized for new hardware features in **next-generation** graphics architectures.
- Worked in a **pre-silicon** environment using **PyTorch** and **HIP** to benchmark architectural performance and behavior.
- Evaluated client-provided **ONNX graphs**, identified **operator fusion** opportunities, and implemented fused operations as optimized GPU kernels.
- Integrated **AI tools** into team workflows to accelerate and automate parts of the development loop.

PROJECTS

Sandbox Simulator (*Next.js, Supabase, FastAPI*) *App*

- Developed and shipped a **world-building simulation platform** for creating and simulating custom competitive ecosystems, growing to **10,000+ registered users** and **20,000+ weekly visitors**.
- Built a configurable **simulation engine** supporting user-created players, teams, organizations, seasons, statistics, and persistent competitive worlds.
- Engineered a scalable **full-stack architecture** using Next.js, FastAPI, and Supabase, building **frontend and backend** systems for persistent game state and large-scale simulation workloads.
- Managed user support by triaging **bug reports**, feature requests, and feedback while shipping frequent fixes and product improvements.

Resume Matcher (*Next.js, FastAPI, LLaMA 3*) *App — Repo*

- Built an end-to-end **AI-powered resume optimization platform** that compares resumes against job postings and generates tailored recommendations and **LaTeX edits**.
- Integrated **LLaMA 3** with **FastAPI** for contextual resume analysis, improving match quality by **40%**.
- Built an automated **PDF parsing and LaTeX compilation pipeline** to extract content, apply generated edits, and regenerate polished resumes.

Schedules (*TypeScript, Supabase, Prisma*) *App — Repo*

- Built an app that parses XLSX schedules to display shifts, coworkers, and sync with **Google Calendar**.
- Deployed to **15+ coworkers** at Crocs Inc.; used **Prisma** and **Supabase** for reliable storage and automated shift visualization.
- Implemented a **pay calculation system** that calculates expected salary from scheduled shifts, hours worked, and pay rates.

Autonomous Recycling System (*Python*) *Repo*

- Programmed an autonomous bottle-sorting system using weight/color sensors and robotic arms in both a **QLabs** simulation and a real-life environment.
- Filtered noisy sensor data to achieve **90%+ classification accuracy** across **50+ tests**.

TECHNICAL SKILLS

Languages: C/C++, Python, Java, TypeScript, JavaScript, Bash, SQL, HTML/CSS, Verilog

GPU/ML: HIP, CUDA, PyTorch, ONNX, GPU Kernels, Operator Fusion, Groq API

Full-Stack: FastAPI, Node.js, REST APIs, PostgreSQL, Supabase, Prisma, Firebase, React, Next.js, Tailwind CSS

Cloud/DevOps: Azure, GCP, Terraform, CI/CD, Docker, Vercel

Core CS: Data Structures, Algorithms, OOP, Design Patterns, System Design, Debugging, Testing

Development Tools: Git, GitHub, JIRA, Atlassian
